Keywords: Science Didaktik; children's science thinking; science educational principles; critical education. Introduction. This article deals with science or emergent science in preschool, which can be defined as all concrete, experimental activities children carry out in social interaction, which contribute to children's interest and slowly. However, still one can ask why should science be implemented in early childhood education and care? Why Science in Preschool? There are a number of reasons for constructing a science Didaktik and implementation of science activities in. live and in other words: they learn. Appropriation of culture is not possible for the child in isolation. As noted by Curious Crayons book. Read reviews from worldâ€™s largest community for readers. Features of Curious Crayons: -Includes 19 activities that foster age-appro... -Provides useful information for teachers on the science of wax and crayons and on current research in early childhood education, such as process skills, learning cycles, inquiry-based science, and documentation. ...more. Get A Copy. Amazon. X, 358 pages : 23 cm. "The new third edition of this book focuses on early childhood education from birth through age eight. Based on theories of child development, this resource depicts how to integrate scientific concepts with music and movement, language arts, social studies, and art. The book uses a problem-solving approach to discuss constructive concepts along with a balance of naturalistic, informal, and structured activities and experiences. The importance of literature and writing in science education is emphasized. Also, the book describes how to use dramatic play and thematic p
