This book is therefore a vital and timely addition to the economic debate, particularly coming as even the mild and begrudging efforts at fiscal consolidation from the previous coalition and Conservative governments appear to be at risk of reversal. Over the five years to 2020, nominal government spending is planned to continue to rise, real government spending to go up slightly and spending as a proportion of national income at factor cost fall to 41 per cent. Some forms of government spending can promote growth, especially capital spending.
