He introduces readers to the major players and the times they lived, explains the scientific principles involved, and shows how such controversies are not only typical, but often necessary to the progress of science. Bringing the cataclysmic clash of ideas and personalities to colorful life, Hellman explores both the science and the spirit of the times. His most recent penchant is for having written Great Feuds in Science (New York, John Wiley & Sons, 1999) and now presenting us with Great Feuds in Medicine. In this most recent book the ten chapters include those concerning: Galvani vs. Volta; Golgi vs. Ramon y Cajal (The Neural Network); Sabin vs. Salk; Franklin vs. Wilkins (DNA); and Gallo vs. Montagnier (AIDS). However, makes for a catchy title, and the subtitle (Ten of the Liveliest Disputes Ever) should alert the potential reader to the true nature of the book at hand. Hellman, on the basis of the extensive bibliography included, has read widely and well on the controversies he covers. He also provides an excellent set of notes in reference to the statements made in the body of the book.

Some of the greatest feuds and rivalries in the history of science is a reminder that a scientist in pursuit of reputation can be as dangerous a foe as you'll find anywhere on earth. By John Loeffler. December 19, 2018. 1, 2. Isaac Newton was no doubt one of the greatest scientists who ever lived and his work is rightfully viewed as revolutionary in our understanding of the universe. But the controversy over his invention of calculus was squarely challenged by a lesser known mathematician named Gottfried Leibniz. Unless you've taken a Calculus class, you almost certainly have no idea who Leibniz is, which is exactly how Newton and his allies wanted it.

The dramatic stories of ten historic feuds: How they altered...Â In Great Disputes in Science, Hellman goes through what he considers to be the 10 greatest scientific disputes of all time. All of them are given in concise chapters, keeping the actual hard science to a minimum, and just focusing on the story telling (and gossip!) of what happened. Some of these disputes are more well known (like the Scopes Monkey trial, Galileo vs. the church, or basically everyone vs the church) while others I had no clue about (like Leaky and Johansen and the fossil dispute).
